PROFESSIONAL SUMMARY

Software Engineer with 3+ years building data pipelines, BI dashboards, and analytics infrastructure for enterprise banking platforms. Built Python ETL workflows processing data across Oracle, ServiceNow, and JIRA with 99.8% accuracy. Engineered Power BI dashboards that improved release efficiency by 30% across enterprise teams. Experienced in SQL, Python, Power BI, Tableau, and data quality engineering at scale. Oracle Certified Java SE 11 Developer.

AREAS OF EXPERTISE

SQL & Data Modeling • Python ETL Pipelines • BI Dashboards • KPI Reporting • Data Quality Engineering
Power BI • Tableau • Data Validation • Stakeholder Analytics • Production Data Monitoring
REST API Development • Cloud Infrastructure (AWS) • CI/CD • Agile Delivery • Data Storytelling

PROFESSIONAL EXPERIENCE

LTIMindtree

2021 - 2024

Software Engineer | Client: Citi Bank | Bengaluru, India

- Built and maintained Python ETL pipelines for large-scale data processing across Oracle, ServiceNow, and JIRA, implementing validation, transformation, and routing logic with 99.8% data accuracy
- Engineered Power BI dashboards with real-time deployment metrics, quality indicators, and KPI tracking that improved release decision-making and planning efficiency by 30% across enterprise teams
- Authored complex SQL and PL/SQL queries across Oracle and MySQL databases, building validated datasets for KPI tracking, quality reporting, and executive stakeholder decision support
- Designed data validation checks and quality gates across production data flows, reducing manual review effort and improving data trust for downstream engineering and business consumers
- Built FastAPI REST APIs for structured data ingestion, integrating a hybrid ML classification pipeline that automated log triage and reduced analysis time from hours to seconds per batch
- Partnered with product, QA, and engineering stakeholders to translate ambiguous operational questions into well-defined metrics, dashboards, and actionable data-driven recommendations
- Implemented automated test coverage using pytest and Tricentis Tosca across 13 enterprise applications, achieving 85% test coverage and preventing 90% of defects from reaching production
- Orchestrated Oracle ERP/EPM/AFCS releases with zero-downtime deployments, maintaining 99.8% system availability across mission-critical enterprise banking infrastructure
- Built automated data quality monitoring and alerting for production pipelines, catching schema drift, null spikes, and volume anomalies before they impacted downstream reporting systems

Omdena

2025

Data & AI Engineer (Open Source Contributor)

- Built backend data APIs and ML pipelines for CropLogic, owning end-to-end data flow from raw ingestion through transformation, validation, API serving, and dashboard-ready output generation
- Built an LLM-powered analysis agent assessing COVID-19 lockdown impact on Italian crime rates, delivering interactive dashboards with geographic trend visualization and near-term predictions

PROJECTS

End-to-End Data Pipeline | Python, Pinecone, FastAPI, AWS

Full data pipeline covering ingestion, transformation, vector storage, semantic retrieval, and analytics API — deployed on AWS EC2/S3 with CI/CD automation

Log Classification Pipeline | Python, FastAPI, Sentence Transformers, pytest

Structured feature extraction, ML classification, evaluation, and REST serving workflow — pytest-driven validation achieving 99.8% precision on held-out data

Data Analysis Agent | Python, LLMs, Pandas, Matplotlib

LLM-powered context-aware analysis tooling for automated data exploration, statistical insight generation, and interactive dashboard-supported reporting

TECHNICAL SKILLS

Data & Analytics: SQL, PL/SQL, Power BI, Tableau, Excel, Pandas, NumPy, Matplotlib, Seaborn, scikit-learn

Languages: Python, Java, JavaScript, TypeScript, Shell Script

Databases: Oracle, MySQL, MongoDB, MSSQL, Elasticsearch, Pinecone

Backend & APIs: FastAPI, Flask, REST APIs, OpenAPI, Microservices

Cloud & DevOps: AWS (EC2, S3, Lambda), Docker, Jenkins, GitHub Actions, CI/CD, Git, Linux

AI & ML: LangChain, LLMs, RAG, Sentence Transformers, HuggingFace, Ollama

Testing: pytest, unittest, TDD, Data Validation, Quality Gates, SonarQube

EDUCATION & CERTIFICATIONS
