PROFESSIONAL SUMMARY

Software Engineer with 3+ years building test automation frameworks, quality infrastructure, and CI/CD pipelines for enterprise banking systems. Built automated test suites covering 13 applications at 85% coverage, reduced regression cycles by 50%, and prevented 90% of critical defects from reaching production. Experienced with pytest, Selenium, Tricentis Tosca, Jenkins, and data validation frameworks. Oracle Certified Java SE 11 Developer.

AREAS OF EXPERTISE

Test Automation Frameworks • CI/CD Pipeline Integration • Quality Engineering • pytest • TDD
Regression Testing • API Contract Validation • Data Validation • Tricentis Tosca • Selenium • Playwright
Requirement Traceability • Defect Prevention • Release Quality Assurance • Python Development • SonarQube

PROFESSIONAL EXPERIENCE

LTIMindtree 2021 - 2024

Software Engineer | Client: Citi Bank | Bengaluru, India

- Built and maintained automated test frameworks using pytest and Tricentis Tosca across 13 enterprise applications, achieving 85% test automation coverage and cutting regression cycles by 50%
- Wrote pytest test suites for backend services covering unit, integration, and API contract validation, reaching 90%+ code coverage with tests integrated directly into CI/CD pipelines
- Designed and enforced SonarQube quality gates with automated static analysis on Python and Java codebases, preventing 90% of critical defects from reaching production environments
- Built CI/CD pipeline stages in Jenkins that identified affected tests from code changes and triggered automated execution, cutting developer feedback time from hours to minutes
- Developed automated validation frameworks for Oracle ERP/EPM/AFCS releases, verifying system behavior across staging and production environments with zero-downtime rollout strategies
- Maintained full requirement-to-test traceability using Zephyr and JIRA, ensuring audit-ready coverage mapping and compliance documentation across all 13 enterprise applications
- Engineered a hybrid log validation pipeline using sentence transformers and ML classification to automate anomaly detection in production logs, achieving 99.8% classification accuracy
- Built Power BI dashboards tracking test execution results, defect trends, and release quality indicators in real time, giving stakeholders visibility into quality health across releases
- Orchestrated release deployments across mission-critical banking infrastructure, maintaining 99.8% system availability through careful validation and blue-green deployment coordination

Omdena 2025

Data & AI Engineer (Open Source Contributor)

- Built backend APIs and ML data pipelines for CropLogic using a full TDD approach with pytest, covering ingestion, processing, and validation stages with 99.8% precision on held-out data
- Engineered deterministic log normalization and context classification modules with documented, reusable Python components consumed by a globally distributed engineering team

PROJECTS

ML Classification Pipeline | Python, FastAPI, pytest, Sentence Transformers

End-to-end pipeline covering feature extraction, model training, evaluation, and REST serving — built with full TDD using pytest, achieving 99.8% held-out precision

Medical Chatbot | Python, LangChain, Pinecone, FastAPI, Docker, AWS

RAG-based Q&A system with FastAPI endpoints and automated test coverage for API validation, deployed via Docker containers with GitHub Actions CI/CD

Real-Time Inference Service | Python, Ollama, SmoIVLM

REST service for live data ingestion and on-device ML inference on edge hardware, validated across software and hardware components with real-time streaming

TECHNICAL SKILLS

Testing: pytest, unittest, TDD, Selenium, Playwright, Tricentis Tosca, SonarQube, Code Coverage Analysis

Languages: Python, Java, TypeScript, SQL, PL/SQL, Shell Script

CI/CD & DevOps: Jenkins, GitHub Actions, Docker, CI/CD Pipelines, Git, Linux

Backend & APIs: FastAPI, Flask, REST APIs, OpenAPI, Microservices

AI & ML: LangChain, Sentence Transformers, HuggingFace, Ollama, ML Validation Pipelines

Databases: Oracle, MySQL, MongoDB, Elasticsearch

Tools: JIRA, Zephyr, ServiceNow, Power BI, VS Code, PyCharm

EDUCATION & CERTIFICATIONS
